# PREMIUM DESIGN & FULL OF FEATURES

ITAB SIGMAGATE

Sometimes you need something extraordinary. A strong visual appeal, advanced technical features or simply an extremely compact solution. Now we can offer you all of these benefits. It's all packed into our top-of-the line solution for access control in shop environments – the ITAB SigmaGate.

SigmaGate is the choice to make when aiming for a prestigious and elegant look. But also when you want uncompromised, top level performance. A broad range of technical options are available and its appearance can be customized to your taste.

SIGMAGATE FEATURES

SigmaGate is a name not chosen by chance. Sigma is the greek letter "S", which represents four important features: SigmaGate is a *Sliding* gate-type, which makes it extremely *Slim* and space saving. Its construction incorporates features that make it both *Secure* against unauthorized access and *Safe* for your customers to use.

SCANNING.
An optional integrated receipt-scanner is available. Provides maximum security in a very compact and neat construction.

SPACE SAVING.
Sliding doors require much less space and safe zone area to operate. The risk of hitting people or objects, as with ordinary swinging gates, is eliminated.

LIGHTING. The sliding gate arms have built-in LED lights that can signal status with blink patterns and shifting colours. Text/logos can be engraved.

Adaptable with interfaces for fire alarms and computer control etc.

The scanner (option) can read QR and barcodes, on-screen or from printed receipts.

Secure against unauthorized access and safe for your customers to use.

Adjustable open times can be fine-tuned for perfect performance in each case.

ITAB SIGMAGATE

SLIM, SLIDING, SAFE AND SECURE

SigmaGate is available in a stainless steel finish or can be ordered lacquered in any custom colour. The transparent gates are illuminated and can be engraved with logos, text or symbols.

The LED illumination can be coloured according to your corporate profile, but can also switch between red and green to indicate status or blink to attract attention – for instance if an intrusion alarm has been triggered.

INTELLIGENT AND CONNECTED
SigmaGate is ready to be connected to any POS system eg to increase

▶ **SCANNING.** An integrated receipt-scanner is available as option.

security by validating the purchase and payment before allowing any exit. Or to be opened remotely either manually or if, for example, a fire alarm has been triggered.

An optional integrated receipt scanner with built-in intelligence can offer stand-alone validation of authorized bar code sequences.

SAFE AND SECURE
The sliding door mechanism has both photocell and resistance sensors that prevent pinching.

Optional radar functionality can increase security and provide a *"welcome"* feature for entry purposes. The gate is then open by default and only closes if someone tries to exit the wrong way.

SigmaGate is also equipped with *"panic"* functionality – a safety feature that allows force opening when a set level of momentum is reached.

▲ **POS-CONNECTED OR STAND-ALONE SCANNERS** can validate payment transactions and unlock the gates.

▲ **PANIC FUNCTIONALITY.** A safety feature that allows force opening when a set level of momentum is reached.

▲ **FINISH.** The gate is available in stainless steel finish and can be ordered lacquered in any custom colour.
